your fashion queries**

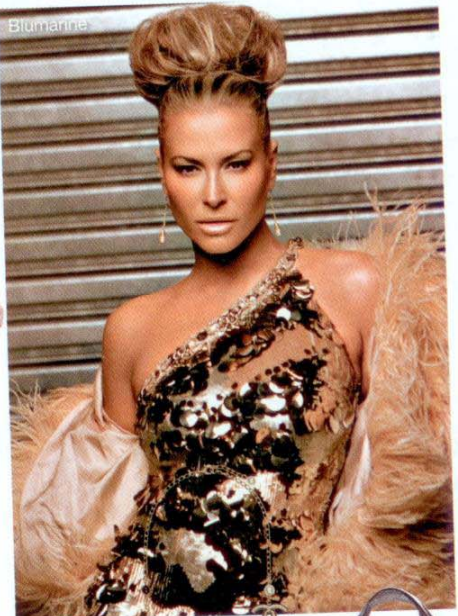

Q Metallics are always very hot for Fall/Winter, especially gold and silver, and I love these colours. But is it possible to mix and match them? Or should I stick to one shade throughout a look? — Cheryl Soh

Gone are the days when everything has to be matchy-matchy. Need proof? Look no further than the multitude of designer bags, shoes and accessories that have elements of both gold and silver this season. There's no harm in mixing metallics to make a bold statement. For starters, you could stack rows of bangles and bracelets on one arm, alternating between the two shades. Or pile on layers of necklaces that include both gold and silver materials. Just make sure that the items have a similar finish — that is, pair matte gold with brushed silver, or shiny gold with glossy silver. If you dare, try on a gold dress and add on subtle silver accessories. But avoid wearing the two hues from head to toe, unless you want to look like you're wrapped in tinsel. •
